Mass Lab

NAME:	NAME:	
-------	-------	--

PROCEDURE

- 1. Share a triple beam balance with your partner or group.
- **2.** Properly carry the balance to the area you want to work by placing one hand under the balance and the other hand on arm.
- 3. Make sure the TBB is on a level surface.
- **4.** Check to see that the Pointer is pointing at zero. If it is not, zero the TBB.
 - Check to see that all the Riders are all the way to the left at the Zero mark.
 - Adjust the balance by turning the Adjustment Knob <u>slowly</u> until it points to zero.
- **5.** Choose an object from the counter and place it onto the pan. Record object in table.
- **6.** Move the largest rider along the beam to the right until it is at the last notch that does not tip the balance. Record the 100s in the table.
- 7. Repeat step #6 using the next largest rider. Record the 10s in the table.
- **8.** Repeat step #6 using the smallest rider until the pointer rests at 0. Measure ones to the nearest **0.1** of a gram and record in the table.
- **9.** Add the readings from the three beams together to get your mass measurement. Record the total mass in the table.
- 10. Remember to label all of your numbers!
