

Weathering and Erosion around Us

create a digital story using Windows Movie Maker (MM).

Procedure

1. Find evidence and take pictures of weathering and erosion around your home or community. At least 6 pictures are needed for the story so it's a good idea to take more than needed. It's much easier to delete an extra photo than to need one at the last minute.
2. Use the story board to plan the order of pictures and to write a script for at least 6 pictures. The script needs to include:
 - Place where picture was taken
 - Type of weathering pictured
 - Story of how you think weathering occurred
3. Upload pictures to MM.
4. Create a title page which includes a title and your first name. These will be placed on our wiki so only first names will be used.
5. Put your pictures in the order that you need them.
6. Narrate your story. Use appropriate pacing, expression, and enunciation while recording your story. The project should be no longer than 5 minutes.
7. Choose a transition and use the same one throughout your entire project.
8. No music will be used.
